

SWFcontract Shading Systems Green Info Sheet

SWFcontract

Green Properties of SWFcontract Solar Shades

- Solar Shades have a shading coefficient ranging from .21 to .74, blocking solar heat gain and lowering energy costs. In the process, glare is reduced on computer screens providing relief from eyestrain.

- The openness factor of the fabrics range from 1-10% open. Additionally, several opaque, blackout fabrics are available. Blocking UV rays reduces heat transmittance lengthening the life of furniture, fabrics and interior finishes, protecting the durability of these items while reducing sending damaged products to a landfill prematurely.

- SWFcontract solar shades carry a limited lifetime warranty not to exceed 25 years and are designed engineered and tested to ensure a long life, reducing landfill waste created by short-lived products. Motors are warranted for five years.

Eco-Friendly Raw Materials

- Several of SWFcontract solar shade fabrics are GREENGUARD® certified. GREENGUARD® Environmental Institute (GEI) is an independent, non-profit organization that establishes standards to define goods with low chemical and particulate emissions for indoor use – primarily building materials.

- Plastic components in solar shades contain up to 50% pre-consumer recycled material. The aluminum tube and fascia and the steel hem bar and chain control are 100% recyclable.

- All packaging materials are 100% recyclable. The corrugated cardboard contains 35-40% recycled content. The angle board used to reinforce the cardboard is 100% recyclable and contains 80% post-consumer recycled material and 20% pre-consumer recycled material. Poly tubes, EPS pads, parts tub and bubble wrap used in packaging are also 100% recyclable.

Springs Window Fashions is proud to be affiliated with the following organizations that share our vision of sustainability and responsibility:

Green by Nature is Springs Window Fashion's commitment to the environment.
