SWFcontract: Your Green Partner
Social responsibility is a fundamental principle of the SWFcontract mission. Part of that obligation is working toward a greener future by creating environmentally responsible products. You can feel confident specifying SWFcontract Solar Shading Systems to meet your clients’ requirements in today’s eco-conscious marketplace.

Green Product Features
• Boasting a shading coefficient range of .21 to .74, SWFcontract Solar Shades prevent heat gain, which conserves energy and lowers cooling costs.
• With an openness factor of 1–10%, solar shades block harmful UV rays, protecting furniture, fabrics, and interior finishes. This extends the life of furnishings and prevents them from ending up in landfills prematurely.
• Several opaque and blackout fabrics are available in solar shades, providing the best possible energy efficiency and insulation.
• To help create healthier indoor environments, several SWFcontract Solar Shade fabrics are GREENGUARD® certified—they have successfully met the GREENGUARD Environmental Institute’s rigorous chemical emissions standards.
• SWFcontract Solar Shades are designed, engineered, and tested to ensure a long product life. This ultimately reduces landfill waste and conserves resources. (SWFcontract Solar Shades have a limited lifetime warranty up to 25 years; motors are warrantied for five years.)

REDUCE YOUR ENVIRONMENTAL IMPACT
WITH SWFcontract SOLAR SHADES

Making a Green Difference
SWFcontract is proud to be affiliated with organizations that share our vision of sustainability and responsibility.
Eco-Friendly Manufacturing

• **100% Recyclable**  In solar shades, the aluminum tube and fascia, and steel hem bar and chain control are 100% recyclable. We also design minimal product packaging that is 100% recyclable.

• **Recycled Content**  The plastic components of the shades contain up to 50% pre-consumer recycled material. The corrugated cardboard used in packaging contains 35–40% recycled content. The angle board used to reinforce the cardboard contains 80% post-consumer and 20% pre-consumer recycled material.

• **Green Processes**  SWFcontract sustainable practices also include recycling all metals, plastics, fabrics, paper, and waste wood in our plants, diverting these materials from landfills.

Dedicated and Diligent

Trust SWFcontract to always work toward the most environmentally friendly products and processes. Our smart environmental strategies can reduce your eco-impact and help drive business as you strive to meet your clients’ needs.
